Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

(800) 424-9393  
Wash. D.C. Area 366-0123

Case Vehicle (A): 1998 Dodge  
 Type: Caravan, 4-door van  
 Driver: 28-year-old female (30 weeks pregnant)  
 CDC: 12-FREW-1

Vehicle (B): 1990 Nissan  
 Type: Pickup, 4x2 regular cab  
 Driver: 53-year-old male  
 CDC: 99-0000-0

## SITUATION

(Slides 1, 2) On a cloudy, dry day, case vehicle (A) was traveling west at a driver-estimated speed of 45 mph (72 kph) in the westbound lane of a two-lane asphalt road, in a rural area. Vehicle (B) was stopped facing south in a private drive that intersects with the two-lane road. As case vehicle (A) approached the private drive, vehicle (B) moved out into the intersecting westbound lane and began to make a left turn to travel east. The driver of case vehicle (A) was unable to avoid being struck in the right front by the left front of vehicle (B).

## GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

(Slide 3) The direct damage to case vehicle (A) began at the right-front bumper corner and extended 46 cm across the front bumper, resulting in a 32 percent vehicle overlap. The damage also extended 92 cm rearward along the right fender, with a maximum crush of 15 cm. (Slide 4) The maximum crush to the right-front bumper corner was 6 cm.

Using the WinSMASH accident-reconstruction program and c-values measured for (slides 5, 6 and 7) case vehicle (A), the following impact severity was calculated:

Vehicle	Variable	Calculated Velocity Change - kph (mph)		
		Total	Longitudinal	Latitudinal
Case Vehicle (A)	EBS	13 (8)	-12 (-8)	-2 (-1)

## DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

### Exterior

(Slides 8, 9 and 10) The right fender was crushed, the right turn indicator light was broken, and the right-front wheel was damaged. (Slides 11, 12) The right-front bumper corner was damaged, the right headlight was broken and there was damage to the right side of the hood. (Slide 14) There was no damage to the hood latch or hood hinges, and the rear edge of the hood was not elevated. Also, there was no damage to the windshield. In addition, the right wheelbase was reduced 6 cm. (Slide 13) There was no other damage to the right side and the doors were all operational.

(Slides 15, 16) There was no damage to the left side and no change in the left wheelbase. Both left-side doors were operational. (Slide 17) There was no damage to the rear of case vehicle (A).

### **Interior**

(Slides 18, 19) This vehicle is equipped with steering-wheel and passenger frontal-impact airbags, which deployed during the frontal impact. (Slides 20, 21) There was no damage to the steering-wheel rim and no rotation of the steering column. (Slide 22) There was no damage to the left side of the upper or mid portions of the instrument panel, or the knee bolster. (Slide 23) There was no damage to the center instrument panel or the glove compartment. (Slides 24, 25 and 26) The distances between the lower steering-wheel rim and the seat cushion and the seat back were documented with the seat adjusted to the driver's reported pre crash position. The lower rim was 46 cm from the seatback, and the upper rim was 74 cm from the headrest. (Slides 27, 28 and 29) There was no interior damage and no intrusions were noted.

### **PREGNANT OCCUPANT KINEMATICS AND INJURIES**

(Slide 30) The 5-ft, 8-in, 250-lb female driver was 30 weeks pregnant with twins. (Slides 31, 32, 33, 34, 35 and 36) She was wearing the available three-point belt, as evidenced by gray plastic marks on the shoulder-belt webbing from the plastic guide on the B-pillar, and the fact that the cover over the B-pillar was damaged. The steering-wheel frontal-impact airbag also deployed during this crash. (Slide 37) The shoulder-belt anchor point was adjusted to the lowest position on the B-pillar, and the driver reportedly had the seat adjusted to a rear-track position. She did not report any problems wearing the belt due to her pregnancy. She also had the steering-wheel in the full-up position due to her large pregnant abdomen, and she had her hands on the steering wheel at the 10 and 2 o'clock positions. She reportedly did not have time to apply the brakes before the impact.

During the impact, she continued forward and to the right relative to the vehicle interior into the belt restraints and the airbag. She complained of "stinging to her face" from contact by the deploying airbag, and pain in her right wrist. Radiology reports show no wrist fracture or dislocation.

After the crash, she complained of contractions, and was transported to a nearby hospital via ambulance. At the hospital, fetal heart tones were initially 120 to 140. Contractions subsided and she was discharged home within forty-eight hours of the crash. Fourteen days after the crash, she still complained of right wrist pain, but new x-rays reveal that there was no fracture or dislocation.

The following table (slide 38) and attached drawing summarize the information for the restrained driver.

### **NEONATAL OUTCOME**

On May 11, 2000, at a gestational age of 35 weeks, the patient delivered a healthy 2.94 kg (6 lb, 7 oz) baby girl and a 2.39 kg (5 lb, 4 oz) baby boy by cesarean section. Apgar scores for both babies were 9 and 9 at 1 and 5 minutes, respectively.

## CODES FOR COLUMN B, OCCUPANT SPACE NUMBER

OCCUPANT SPACE NUMBER IS A TWO-DIGIT CODE. THE USE OF THE CODE IS DETERMINED BY THE VEHICLE SEAT CONFIGURATION AT THE TIME OF THE ACCIDENT.

## FIRST DIGIT

THE FIRST DIGIT (LEFT DIGIT) DENOTES THE SEAT ROW, WITH CODE VALUES FROM 1 TO 5.

## SECOND DIGIT

THE SECOND DIGIT (RIGHT DIGIT) DENOTES THE POSITION ON THE SEAT AND, IN SOME INSTANCES, THE WIDTH OF THE SEAT.
